PROFESSIONAL SUMMARY

Software Support Engineer with 2 years of experience in production support, incident management, and enterprise application validation in a product-based environment. Skilled in Linux-based troubleshooting, SQL validation, REST API analysis, and root cause analysis for customer-facing applications. Track record of owning weekly production releases, driving ~40% defect reduction, and collaborating with cross-functional stakeholders across engineering, product, and business teams.

TECHNICAL SKILLS

Languages: Java

Databases: SQL, MySQL

Operating Systems: Linux

API & Tools: REST APIs, Postman

DevOps: Docker, Kubernetes

Version Control: Git, GitHub

Project Management: JIRA, Agile, Scrum

Testing & Validation: Functional, Regression, Smoke, Sanity, Integration, UAT, API, Mobile, Web, E2E, Release & Production Validation

Support & Operations: Incident Management, Root Cause Analysis, Log Analysis, Production Support, Troubleshooting, Deployment Validation, Stakeholder Management, Defect Lifecycle

PROFESSIONAL EXPERIENCE

DigiMantra Labs

Software Support Engineer (SDET) | May 2024 – Present

- Owned end-to-end production validation for weekly releases across customer-facing enterprise web and mobile applications, preventing critical defects from reaching international end users.
- Investigated production incidents through log analysis on Linux and SQL data validation, contributing to a ~40% reduction in production defect rate and faster mean-time-to-resolution.
- Performed root cause analysis (RCA) for post-deployment issues and communicated findings with resolution timelines to cross-functional stakeholders including product, engineering, and business teams.
- Validated 300+ user stories across sprint cycles via functional, regression, smoke, sanity, and integration testing — achieving 98% on-time delivery across 25+ sprint releases.
- Executed REST API validation using Postman, verifying request/response integrity, authentication flows, and service dependencies for production microservices.
- Supported deployment pipelines by collaborating with DevOps teams to verify environment stability and deployment readiness pre- and post-release.
- Managed defect lifecycle in JIRA across Agile sprint boards, ensuring prompt escalation and closure of production-impacting issues.

PROJECTS

EarthLink — Enterprise Telecom & ISP Platform (Primary)

Aug 2024 – Present | Linux · SQL · REST APIs · Postman · JIRA · Agile

- Supported 40+ production releases for a US-based enterprise ISP serving millions of customers across broadband, fiber, and mobile services.
- Validated 300+ production user stories; maintained release success rate above 98% through structured pre-release smoke, regression, and sanity testing.

- Performed production incident triage and RCA via Linux log analysis and SQL queries, reducing recurring defects by ~40%.
- Conducted REST API validation across provisioning and account management microservices, preventing integration failures during deployments.
- Collaborated with 20+ cross-functional stakeholders to communicate incident impact, RCA findings, and release readiness.

VeriHire — AI-Powered Enterprise SaaS Recruitment Platform

| REST APIs · Postman · SQL · JIRA · Agile

- Validated candidate screening workflows and AI-driven shortlisting logic across functional, regression, and UAT cycles for enterprise recruitment SaaS.
- Tested REST APIs for screening pipelines and interview scheduling modules, identifying critical integration defects pre-release.
- Collaborated with product and development teams in Agile sprints to triage production-reported defects and verify fixes prior to deployment.

HyreWorks — Enterprise SaaS Employee & Project Management Platform

| REST APIs · SQL · MySQL · Postman · JIRA · Agile

- Delivered production support and release validation for employee onboarding, project workflows, and role-based access control modules.
- Executed SQL queries against MySQL databases to validate employee records, project hierarchies, and permission data ahead of production deployment.
- Triage and resolved production incidents related to user permission conflicts, performing RCA and coordinating fixes with the engineering team.

EDUCATION

Bachelor of Engineering – Computer Science & Engineering

Shoolini University | 2020 – 2024 | CGPA: 8.4 / 10

AISSCE – PCM with Informatics Practices

Army Public School, Jalandhar Cantt

KEY ACHIEVEMENTS

-
- Supported 40+ production releases with consistent delivery of defect-free, customer-ready builds for an enterprise telecom platform.
 - Contributed to ~40% reduction in production defects through proactive validation, RCA, and structured pre-release testing.
 - Achieved 98% on-time delivery across 25+ sprint releases, maintaining high release velocity without compromising product stability.
 - Recognized internally for end-to-end ownership of release quality and driving cross-team resolution of critical production incidents.
